

Hydar Hafiz bin Hydzelan

Backend Software Engineer

Bangi, Selangor, Malaysia • Open to relocation across Malaysia • Available November 2026
shogunix.chan@gmail.com • linkedin.com/in/hydar-hafiz-356128233 • github.com/Hydarhafiz

PROFESSIONAL SUMMARY

Backend software engineer with hands-on ownership of FastAPI/PostgreSQL services and AWS deployment operations. Experienced taking over early-stage systems, improving calculation traceability and release reliability, and designing graph-backed AI workflows with deterministic validation and bounded LLM analysis. AWS Certified Machine Learning Engineer – Associate.

TECHNICAL CAPABILITIES

Backend: Python • FastAPI • REST APIs • PostgreSQL • SQL • Async Python • Pytest
Cloud & DevOps: AWS • Docker • GitHub Actions • GHCR • Nginx • Linux • CI/CD
Applied AI: Neo4j • GraphRAG • Knowledge Graphs • LLM Integration • Deterministic Retrieval • Validation & Fallback
Supporting Technologies: TypeScript • Angular • Ionic • Node.js • MongoDB • Locust • Git

PROFESSIONAL EXPERIENCE

Backend Software Developer (Contract) — Aerospace Malaysia Innovation Centre Nov 2025 – Oct 2026

- Own backend, database and AWS delivery for SAFAPAC, a deployed beta sustainable aviation fuel analysis platform developed by AMIC in collaboration with Airbus; took over an early boilerplate implementation and substantially rebuilt and productionized the assigned scope.
- Collaborated with five TEA-SAF domain researchers and one frontend developer to restructure FastAPI/PostgreSQL schema and calculation workflows, improving formula traceability, validation, testability and documentation for a five-person Airbus internal pilot group.
- Built containerized staging and production delivery using Docker, GHCR and GitHub Actions; operated AWS VPC, EC2/RDS, S3/CloudFront and Cognito integration alongside Nginx and HTTPS.
- For AIRIS, designed AI workload and concurrency tests, diagnosed bottlenecks, and authored an optimization/testing handoff accepted by the senior engineer; also supported stakeholder training.

Web & Mobile Development Intern — PETRONAS Digital Sdn Bhd Jan 2024 – Aug 2024

- Collaborated within a five-person project team on a MEAN/Ionic booking prototype used to introduce new staff and interns to the technology stack.
- Developed Angular data views and paired on Ionic booking, QR check-in, validation and Android deployment while documenting setup and development practices.

SELECTED PROJECT

AnotherEdenAI Dec 2025 – Present

Personal project • Active development

- Designing an AI-assisted lineup recommendation system using Neo4j graph retrieval, deterministic candidate generation, typed backend validation and bounded LLM analysis.
- Implemented capability-evidence materialization, package-first candidate search, token-budgeted analysis, correction and fallback paths, and provider-neutral interfaces to improve cost control and reliability.

EDUCATION

Bachelor of Computer Science (Hons) — Universiti Teknologi PETRONAS May 2022 – Aug 2025

CGPA: 3.51

CERTIFICATIONS

AWS Certified Machine Learning Engineer – Associate — Mar 2026
AWS Certified Cloud Practitioner — Sep 2025
Microsoft Certified: Azure AI Fundamentals — Jun 2025
